System Requirements

1. PHP version 7.3 or higher
   - `pdo_mysql` - PHP Extension
   - `mysqli` - PHP Extension
   - `intl` - PHP Extension
   - `openssl` - PHP Extension
   - `mbstring` - PHP Extension
   - `exif` - PHP Extension
   - `curl` - PHP Extension
   - `json` - PHP Extension
   - `gd` - PHP Extension
   - `zip` - PHP Extension
   - `pdo_sqlite` - PHP Extension
2. `MySQL` - 5.x or higher
3. `Nginx` or `Apache`

In most hosting accounts these extensions are enabled by default. But you should check with your hosting provider.

Installation

Follow the steps below to setup your hrm software:

For Live server

1. Unzip the downloaded package and open the /Fresh Application Files folder and then go to hrsale_version_3_0_0/ folder
2. Create a subfolder on your host via FTP or File Manager (You can name the folder "hrm or hrms or hr" for-example)
3. Upload the files from the `hrsale_fresh_files` folder of the script into the newly created subfolder on your host
4. Create a MySQL database (Your hosting provider can assist).
   Note: while you creating new database select utf8_general_ci option for Collation. Because this option will work for multi languages.
5. Visit your website where you uploaded the files, For example: http://hr.example.com/installation/
6. The Installation Wizard will open automatically, just follow the steps

For Local server - WampServer, XAMPP, MAMP

1. Unzip the downloaded package and open the /Fresh Application Files folder and then go to hrsale_version_3_0_0/ folder
2. Create a folder in wampserver, xampp or mamp server (You can name the folder "hr or hrm or hrms" for-example)
3. Upload the files from the `hrsale_version_3_0_0` folder of the script into the newly created folder
4. Create a MySQL database. Go to http://localhost/phpmyadmin/ or http://127.0.0.1/phpmyadmin/
   Note: while you creating new database select utf8_general_ci option for Collation. Because this option will work for multi languages.
5. Visit your website where you uploaded the files, For example: http://localhost/hr/installation/
6. The Installation Wizard will open automatically, just follow the steps
